RENDERING CONDITION MATRIX

Synthetic benchmark page - every value below is invented and refers to no real person. Purpose: measure which rendering conditions a tool can read at all. One subject - a single first-and-last name - appears under every orientation, polarity, provenance and size, so a cell measures its condition and nothing else; a copy surviving anywhere means the subject is still disclosed.

UPRIGHT - POLARITY AND GROUND

[t001] 	[t002] 	[t003] 	[t004]
[t005] 	[t006]
